

The Risk-Taking Channel in Colombia Revisited

Working Paper No. 690 Keep in mind

The series Working Papers on Economics is published by the Office for Economic Studies at the *Banco de la República* (Central Bank of *Colombia*). It contributes to the dissemination and promotion of the work by researchers from the institution. This series is indexed at Research Papers in Economics (RePEc).

On multiple occasions, these works have been the result of collaborative work with individuals from other national or international institutions. The works published are provisional, and their authors are fully responsible for the opinions expressed in them, as well as for possible mistakes. The opinions expressed herein are those of the authors and do not necessarily reflect the views of Banco de la República or its Board of Directors.

AUTHOR OR EDITOR Martha López, Fernando Tenjo, Héctor Zárate

Levels of interest rates below historical norms may have enhanced financial instability in developed and developing economies during the 2000's. The risk taking channel of monetary policy transmission is a recent theory that explains the interaction between risk perceptions of the financial system and monetary policy. This paper presents empirical evidence of the risk taking channel of monetary policy using detailed information on consumer and commercial loans from the Colombian banking system. Using probit and duration models we find that the banking system takes on more risk when the level of interest rates are too low. We also find that the response to interest rates is higher in the case of commercial loans.

The views expressed in the paper are those of the authors and do not represent those of the Banco de la República or its Board of Directors.
