[Working Paper No. 762](#)

Keep in mind

The series Working Papers on Economics is published by the Office for Economic Studies at the *Banco de la República* (Central Bank of *Colombia*). It contributes to the dissemination and promotion of the work by researchers from the institution. This series is indexed at Research Papers in Economics (RePEc).

On multiple occasions, these works have been the result of collaborative work with individuals from other national or international institutions. The works published are provisional, and their authors are fully responsible for the opinions expressed in them, as well as for possible mistakes. The opinions expressed herein are those of the authors and do not necessarily reflect the views of Banco de la República or its Board of Directors.

AUTHORS AND/OR EDITORS

[Rafael Hernández](#)

The recent financial crisis has renewed the interest of economists, both at the theoretical and empirical level, in studies for the period 1994-2002, with the intention of determining that the Colombian banking sector is predominantly prudential,

but also that the composition of bank liabilities provides important information regarding the nature of the bank's activity. And, as we have seen, an aggregate measure of bank leverage can mask success in a highly levered activity.

The views expressed in this document are those of the authors and not necessarily those of the Banco de la República. Of course, any mistake in this paper is our responsibility.
