Using the Colombian Annual Manufacturing Survey (EAM) between 2000 and 2013, this paper investigates the existence of heterogeneity in the labor demand within the industrial sector. Long run own-price, output and TFP elasticities vary across a variety of dimensions such as regions, sectors and plant sizes depending on workers' skills and contract modalities (open-ended or temporary). Hence, it matters where one works. Such disparities should be taken into account in the design of policies that promote labor market performance, as outcomes, beyond intentions, are unlikely to be homogenous.

The series Borradores de Economía is published by the Economic Studies Department at the Banco de la República (Central Bank of Colombia).
