Source: Banco de la República.

NOTES:

1/ This is *Banco de la República's* benchmark intervention rate according to the decision reached by the Board of Directors in said month, enforceable since the first working day after that session.

2/ Effective rate. Updated with last labour day of the month data.

3/ Calculated as the weighted average value per amount for consumption, credit, preferential, ordinary, and treasury rates. Due to the high rotation of treasury credit, its weight was determined as the fifth part of its weekly disbursement.

4/ This corresponds to non-VIS weighted housing rates in UVR and pesos.

5/ The indicators at the closing of each quarter are calculated based on the data from the last four quarters.

6/ This includes long-term amortizations and the balance of the short-term debt from a year before.

7/ According to the information from the balance of payments.

8/ (BR) Calculations by *Banco de la República* (Central Bank of Colombia).
