1. Overall Results of the Balance of Payments

During the third quarter of 2023, the current account of the country's Balance of Payments registered a USD 1,680 million (m) deficit, equivalent to 1.7% of quarterly GDP. In turn, the financial account, including the change in reserve assets (USD 457 m), recorded net capital inflows of USD 1,387 m (1.4% of quarterly GDP). Errors and omissions were estimated at USD 293 m.

By components, the deficit in the current account (USD 1,680 m) in the third quarter of 2023 is due to net primary income outflows of USD 3,567 m and deficit balances in foreign trade of goods of USD 1,297 m and in services trade of USD 174 m. These results were partially offset by net income from current transfers (USD 3,358 m) (Graph 1).

Note: According to the Sixth Edition of the International Monetary Fund's Balance of Payments Manual, the financial account is presented with the same sign as the current account. For example, if the current account is in deficit, the financial account is negative, indicating that the economy is resorting to external financing and/or liquidating its external assets to finance its excess current expenditure.

2. Quarterly and annual Evolution of the current and financial accounts

of Colombia's Balance of Payments

a) Current account

The estimated current deficit for the third quarter of 2023 (USD 1,680 m, 1.7% of GDP), compared to the immediately preceding quarter, decreased by USD 665 m, mainly due to a lower deficit in the balance of trade in goods and services and higher net revenues from current transfers, partially offset by higher net outflows from primary income (Graph 1).

For the accumulated January-September 2023, the current deficit (USD 7,092 m, 2.7% of GDP), compared to the same period of 2022, is lower by USD 9,521 m, a behavior that is mainly explained by the reduction of the deficit balance of foreign trade in goods and services, and lower net outflows from primary income.

Deficit

Third quarter of 2023

1.7% of GDP

Second quarter of 2023

2.7% of GDP

b) Financial account

Net capital inflows of USD 1,387 m (1.4% of GDP) recorded in the financial account during the third quarter of 2023 showed a reduction of USD 1,268 m compared to the immediately preceding quarter. This result is explained by lower capital inflows linked to direct investments, higher liquidations of external portfolio investments, and greater constitution of assets abroad, which were offset by higher

external debt.

So far in 2023 to September, compared to the same period in 2022, the financial account (USD 6,800 m, 2.6% of GDP) presented lower net inflows of USD 8,925 m, a dynamic that is mainly explained by lower external financing for loans and debt securities and largest outflows to build assets for other investments abroad, which is partially offset by lower capital outflows to constitute Colombian direct investment abroad.

Net capital inflows

Third quarter of 2023

1.4% of GDP

Second quarter of 2023

3.1% of GDP

3. International Investment Position (IIP)

At the end of September 2023, Colombia recorded a negative net international investment position of USD 189,282 m (54.8% of annual GDP), resulting from assets of USD 243,772 m (70.6% of annual GDP) and liabilities of USD 433,053 m (125.3% of annual GDP). Of the total balance of assets, 32.7% corresponds to portfolio investment, 29.8% to Colombian direct investment abroad, 23.6% to reserve assets, and the remaining 13.9% to other assets, which include loans, other foreign credits, deposits abroad, and financial derivatives. Liabilities are broken down into 57.3% for foreign direct investment, 22.7% for other liabilities (where external loans stand out), and the remaining 20.0% for portfolio investments.
