The southwest region's economy grew in the second quarter of 2025 driven by domestic consumption, which showed growth in retail sales and imports of consumer goods, stimulating road freight transportation from Buenaventura. Agriculture grew due to higher sugarcane productivity, which partially offset the negative impact of rainfall on perishable crops. In contrast, industry declined amid international trade tensions, despite increased demand from major trading partners. Likewise, the construction sector contracted due to a reduction in built areas and housing sales, despite higher mortgage credit disbursements.

Tuesday, 23 of September 2025

Retail trade recorded a rise, driven by increased household spending and supported by higher flows in remittances, improved access to credit, and greater consumer confidence. Vehicle sales contributed to the increase, boosted by lower interest rates, the launch of new models, and favorable financing conditions.

Manufacturing production declined due to contractions in strategic sectors such as chemicals, pharmaceuticals, and metals. However, exports increased, driven by exports of coffee, sugar, and electrical appliances, with expansion into Asian markets.

The agricultural and livestock sector showed mixed results. Rainfall affected the collection of perishables but favored sugarcane productivity. Pig farming declined due to high input costs, while milk procurement

increased as a result of higher demand and improved production practices.
