

Working papers economics - National budget and central government fiscal balance: How are they related and what differentiates them?

Download (only in Spanish) Keep in mind

The series Working Papers on Economics is published by the Office for Economic Studies at the *Banco de la República* (Central Bank of *Colombia*). It contributes to the dissemination and promotion of the work by researchers from the institution. This series is indexed at Research Papers in Economics (RePEc).

On multiple occasions, these works have been the result of collaborative work with individuals from other national or international institutions. The works published are provisional, and their authors are fully responsible for the opinions expressed in them, as well as for possible mistakes. The opinions expressed herein are those of the authors and do not necessarily reflect the views of Banco de la República or its Board of Directors.

AUTHORS AND/OR EDITORS Rincón-Castro, Hernán Zapata-Álvarez, Steven

Although there is a close relationship between the government's budget and its fiscal balance, they respond to different objectives, concepts, accounting bases, and measurement methodologies, which makes their understanding, monitoring, and evaluation more difficult.

Publication Date: Friday, 14 of November 2025

A basic relationship that economic authorities, fiscal and macroeconomic analysts, and investors should be aware of and understand is that between the nation's general budget and the central government's fiscal balance. Despite its importance and ongoing discussion, this connection is not clearly and precisely understood. The objective of this study is to explain in a simple yet technical and rigorous manner the stages of the budget execution process in Colombia, the current measurement of the fiscal balance, and the relationship and differences between them. The study shows that, although there is a close relationship between the two, the measurement of the fiscal balance incorporates accounting, methodological, and operational adjustments that are not included in the approved budget and that make them difficult to connect, understand, and evaluate. For this reason, it is recommended to fully adopt international accrual accounting standards so that they become the monitoring and evaluation statistics for the government's fiscal situation. This would align the budget and the fiscal balance with common principles and methodologies and generate greater transparency, credibility in statistics, and consistency with public and national accounting.
